An ecosystem for employee engagement

For employees to succeed (and contribute to the success of your organization), they need to be connected. Connected to information. Connected to support when they need help. Connected to each other and to the goals of your financial institution.

How do you accomplish this, especially as remote environments become more common than ever before?

Ntranet is a secure, web-based content management solution that allows your team to share documents and content while creating efficiencies across your organization.

With Ntranet you can:

Improve and maintain employee engagement

Our elegant, secure, mobile- and tablet-friendly data infrastructure is easy to administrate and easy to use, making it easy to give employees the ability to navigate and search content pages, document libraries, directories, and more. The web-based platform also promotes collaboration across departments.

Manage training, policies, and procedures

The integrated learning management system includes training, learning plans, exams, and reporting for easier onboarding and continuous learning. Employees can see which courses they've taken and management can view employee progress, ensuring that everyone is up to date on the information they need to do their job.

Streamline internal processes

Departments can build workflows around commonly used business processes such as expense reporting, or standard line of business and consumer requests. Departments can also use the ticket system to request and track services or information.

Provide secure access to relevant information

With the platform's strong filtered search capability, users can easily access permission-based content within all modules of Ntranet, from pages and documents to FAQs and articles.

N TRANET

Key features:

- Secure, web-based system with SSO

- Unlimited users, storage, updates, and support

- Document management that follows your financial institution's existing data loss prevention strategy

- Policy and procedure management and distribution, with robust reporting

- A blogging module to enable the internal sharing of subject matter expertise

- Integrated learning management that includes training, plans, exams, and reporting

- Integrated ticket system to track, prioritize, and solve internal and external problems and help requests

- Strong search capability for easy, permissions-based access to content and resources

- Employee engagement with news and social media feeds, employee recognition, and alerts

Ntranet provides the tools you need for a knowledge ecosystem that actively engages your entire organization.
